EASTMAN KODAK  
METHYLENE BLUE ANALYSIS

Customer Name

Address

MICOR  
500 Charent DA.  
Bensalem PA 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ( $<$ ) 1.4  $\mu\text{g}$  (micrograms) indicate archival quality, and greater than ( $>$ ) 1.4  $\mu\text{g}$  indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

| TEST IDENT | ACTUAL CONCENTRATION | MEETS ANSI STANDARD ( $\leq$ ) 1.4 $\mu\text{g}$ | DOES NOT MEET ANSI STANDARD ( $>$ ) 1.4 $\mu\text{g}$ |
|------------|----------------------|--------------------------------------------------|-------------------------------------------------------|
| 1.190      | 1.20                 | <input checked="" type="checkbox"/>              | <input type="checkbox"/>                              |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |
|            |                      |                                                  |                                                       |

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AC. "A photographic film can be stored and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value." This same Standard sets the archival limit at 1.4  $\mu\text{g}$  for residual thiosulfate.

For additional information on archival storage conditions, you may wish to ask your Kodak representative for a copy of Kodak Pamphlet (1-31) "Storage & Preservation of Microfilms".

A resolution test chart featuring a grid of numbers and letters. The numbers 20, 22, and 25 are arranged vertically on the left. To their right, the letters F, E, C, and D are arranged in a similar vertical column. Further right, the numbers 28, 32, and 36 are arranged vertically. The chart is used to measure the resolving power of an optical system.

A 4x4 grid of 16 grayscale calibration patches, each labeled with a number from 1 to 16. The patches are arranged in a 4x4 grid, with the numbers 1 through 16 increasing from left to right and top to bottom. The patches are labeled as follows:

|    |    |    |    |
|----|----|----|----|
| 1  | 2  | 3  | 4  |
| 5  | 6  | 7  | 8  |
| 9  | 10 | 11 | 12 |
| 13 | 14 | 15 | 16 |

A 4x4 grid of 16 grayscale calibration targets, each labeled with a number from 1 to 16. The targets are arranged in a grid, with the numbers 1 through 16 increasing from left to right and top to bottom. Each target consists of a small square with a grayscale gradient and a numerical label.
